Summary

Full-stack SDE with 2+ years building production-grade ETL platforms and enterprise dashboards for clients including **T-Mobile**. Proven track record of shipping Angular/Node.js features end-to-end, reducing operational overhead, and owning complex integrations in fast-paced remote environments.

Education

Kaziranga University

B.Tech – Computer Science & Engineering | **CGPA: 8.55**

Assam, India

2019 – 2023

Kendriya Vidyalaya

Higher Secondary (Class XII) | 75%

Assam, India

2017 – 2019

Work Experience

Software Development Engineer

Jan. 2024 – Present

TigmaMinds · Billable Consultant to T-Mobile (Jun 2025–Present)

Remote

- [T-Mobile, Jun 2025–Present] Built **Power BI dashboards** adopted by T-Mobile's OPS team for monthly business reviews, eliminating the need to manually create client-facing slides and saving hours of reporting effort per cycle.
- [T-Mobile, Jun 2025–Present] Designed and deployed automated **business workflows** on the ETL platform to fulfil T-Mobile's operational requirements, reducing manual intervention for recurring data processes.
- [ETL Platform, Jan 2024–Jun 2025] Engineered a custom **Node-RED Validation Node** that consolidates full schema validation (data types, values, constraints) into a single node — replacing workflows that previously required **10–30 nodes**, cutting pipeline complexity by over 90%.
- [ETL Platform, Jan 2024–Jun 2025] Delivered production-grade features across an enterprise ETL platform — connections, entities, workflows, and schedulers — shipping UI enhancements, API fixes, and new node development directly to prod.
- [ETL Platform, Jan 2024–Jun 2025] Engineered reusable **Angular Material** components with virtual scrolling and server-side pagination, optimizing front-end performance for datasets exceeding 10k+ records.
- Managed full delivery lifecycle — requirements, code reviews, deployment, and post-launch support — for features in active use by enterprise clients.

Machine Learning Intern

July 2022 – Aug. 2022

TCS iON

Remote

- Built an HR salary prediction model using **Linear and Logistic Regression** in Python, achieving 92% accuracy through data cleaning and feature engineering.
- Created a visualization dashboard to forecast financial trade-offs for job transitions using predictive modelling.

Projects

AI Car Advisor | *Next.js, Groq API, Vercel · [Live](#) · [GitHub](#)*

- Built and deployed a full-stack **AI-powered car recommendation app** using Next.js (FE + BE) and **Groq API** as the LLM engine — live on Vercel.
- Designed a conversational 2–3 question flow that analyses user needs against a curated dataset to deliver a confident, personalised car shortlist — reducing decision paralysis for confused buyers.
- Owns full stack: API integration, AI prompt engineering, dataset curation, UI/UX, and production deployment.

Trading Journal & Strategy Playbook | *Personal Project · [GitHub](#)*

- Built a personal trading journal and strategy playbook to log, analyse, and review trades against a defined ruleset — used daily to track performance and enforce discipline in live trading decisions.
- Demonstrates end-to-end ownership: ideation, design, build, and continuous iteration based on real personal use.

Rice Plant Disease Detection | *Deep Learning, Python, TensorFlow*

- Developed a CNN-based model for early identification of rice diseases; **selected for Google Developers Startup Bootcamp** as a top university project.
- Co-authored a research paper on Deep Transfer Learning submitted to **ICMLDE 2023**, focusing on model stability in edge-case scenarios.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, SQL (MySQL), HTML/CSS

Frameworks & Libraries: Angular, Next.js, Node.js, Node-RED, Flask, Bootstrap, Angular Material

Testing: Playwright, Automated Testing, Postman (API Testing)

Tools: GitHub, Power BI, VS Code

Core Competencies: Data Structures & Algorithms, API Integration, ETL Systems, Scalable System Design, Root Cause Analysis, Secure Coding Practices

Achievements & Leadership

- **Google Developers Startup Bootcamp:** Selected as a top university project for innovative application of Deep Learning.
- **Research Publication:** Co-authored “Assessment of Deep Transfer Learning for Early Identification of Rice Disease,” submitted to ICMLDE 2023.
- **Academics:** Graduated with **8.55 CGPA** in Computer Science Engineering.
